Bandung, Jawa Barat

AI Engineer building production LLM systems, RAG pipelines, retrieval architecture, and agentic tooling for enterprise and regulated domains including legal-tech and banking. Own work end to end: document ingestion and retrieval design, prompt engineering, grounding and citation accuracy, and deployment on AWS and Azure, with Qdrant for vector search and Langfuse for LLM observability. National AI competition winner (Healthkathon BPJS 2024, Turnamen Sains Data Nasional 2023) and APICTA 2024 finalist.

Work Experience

PT Simplify Consulting Indonesia - Jakarta, Indonesia Nov 2025 - Present

Junior AI Engineer

- Built the RAG layer for an AI developer assistant at a national bank, letting engineers query SDLC documentation (PRD, BRD, TSD, and related specs) in natural language to retrieve feature requirements and impact context before making changes.
- Developed an end-to-end RAG pipeline for a legal-tech platform analyzing Indonesian regulations, producing citation-grounded answers traceable to source articles, with a pre-LLM relevance classifier to cut hallucinated citations.
- Owned the data layer for RAG: document ingestion, chunking, and metadata design to make retrieval filterable and context coherent at the section level.
- Built an agentic legal assistant with tool-calling and context compaction to hold case facts across long sessions.

PT Hacktivate Teknologi Indonesia - Jakarta, Indonesia Feb 2024 - Jun 2024

Internship - Data Science Assistant Instructor

- Supported bootcamp students with hands-on questions in Python, SQL, and data analysis during lab sessions.
- Built data analytics dashboards using Looker Studio.

Education

Universitas Komputer Indonesia 📍 - Bandung, Jawa Barat Sep 2021 - Oct 2025

Bachelor of Informatics Engineering, 3.71/4.00

- Received two PKM-KC research grants; actively competed in AI and app development competitions.

Organization

Codelabs - Bandung, Indonesia Mar 2023 - Apr 2025

President & Head of Data Science Research

- Led a product development team consisting of 8 members.
- Developed and maintained AI pipelines using Azure OpenAI, CosmosDB, and Blob Storage for scalable data storage and model deployment.
- Built an educational quiz generator and Mobile JKN chatbot using Retrieval-Augmented Generation.

Skills, Achievements & Other Experience

- **Achievements** 🏆: 1st place - Healthkathon BPJS 2024 Artificial Intelligence category, 1st place - Turnamen Sains Data Nasional 2023, Finalist APICTA Awards 2024, Education category winner - Microsoft Imagine Cup 2023, 1st place - Sahabat Ganjar Hackathon 2022, Finalist Healthcare AI Hackathon Kemenkes 2025
- **Projects** (2023): Developed and deployed multiple ML models for fraud detection, waste classification, and content filtering applications.
- **Projects** (2024): Built an Inclusive Chatbot for the MobileJKN application leveraging Generative AI with multi-language and regional language support.
- **Projects** (2025): Researched and applied Prompt Engineering to detect and correct logical fallacies in chatbot responses.
- **Soft Skills**: Analytical Thinking, Problem Solving, Communication, Team Leadership
- **Hard Skills**: Languages: Python, TypeScript/Node.js, SQL | GenAI/LLM: RAG, Prompt Engineering, Agentic Tool-Calling, LangChain, Qdrant, Langfuse, LiteLLM | Backend: FastAPI, Docker, REST APIs | Cloud & Data: AWS, Azure (OpenAI, Cosmos DB), PostgreSQL, MongoDB | Data & Viz: Pandas, NumPy, Streamlit, Looker Studio
